Laying the Foundation

Sustainable change. It is what almost all non-profits dream about. And it is what Water For People—a nonprofit organization with the mission to eliminate water poverty—is achieving in eleven countries across the globe by applying a Vested® mindset and approach to working with its partners. And its success is taking notice – it is ranked as one of the Best of the Best non-profits by Charity Navigator, an independent watchdog for ensuring that non-profits are providing value with their generous donations.

But why is Water For People creating success where others have failed? And how does it apply Vested principles with their partners – whether those partners are local governments, local non-profits, or private entrepreneurs?

This case study shares how Water For People uses carefully crafted Vested® partnerships to not only get the water flowing – but also keep the water running long after they leave. Real sustainable change.

This study proves that seeking a Vested® mindset is not only good for a business bottom line – it can also help a small charity in Denver, CO have a big impact across the globe.

Why A Vested Approach Makes Sense For Non-Profits

The statistics are staggering. Water is implicated in 80 percent of all sickness and disease worldwide. Some 19 percent of deaths from infection and disease are water related and waterborne diseases contribute to nearly 4 million child deaths. A child dies every three seconds from water and sanitation related illness, often before his or her fifth birthday.

The United Nations estimates 884 million people globally do not have access to safe drinking water and 2.5 billion, including almost one billion children, do not have basic sanitation. Water For People is dedicated to making a difference. It offers straightforward Mission and Vision statements.³

“Water For People works to build a world where all people have access to safe drinking water and sanitation, and where no one suffers or dies from a water - or sanitation - related disease. This is our vision”.

“We’re on a mission. We work with people and partners to develop innovative and long-lasting solutions to the water, sanitation, and hygiene problems in the developing world. We strive to continually improve, to experiment with promising new ideas, and to leverage resources to multiply our impact.”

Most entities working to improve global water access measure effectiveness by numbers of people reached. Water For People follows a results-based philosophy. It measures its success in years of water and sanitation services provided. John Sauer, the Assistant Director, Thought Leadership explains the approach: “When we see a photograph of a celebration of the opening of
How Water for People’s Quest to Vested is Redefining Success for Charities

a community water source, we think of it as a BEFORE picture, not an AFTER picture. Installation is the beginning. Sustainability and replication – that’s the true goal.”

Water For People creates deep partnerships that have a Vested© interest in the same desired outcome as Water For People. Their approach to building alliances in the fight against water poverty is remarkably similar to the approaches P&G, McDonald’s, Microsoft, and others deploy in that they follow the five fundamental Vested© principles. This story tells how passion, commitment, trust, and mutual consideration come together to demonstrate how, with a little help, people can reject being victims of nature to become victors of nature.

Turning Passion To Power: Playing By The Vested Rules

Clearly, passion inspires action in nonprofit organizations. Without it, non-profits would not exist. However, passion without discipline creates activity, but not necessarily, progress. And certainly not excellence or sustainable success. Sustainable results—indeed sustainable organizations—require a framework of rules that define and guide the work and provide accountability for those who support the cause.

Water For People has turned passion into power by creating partnerships that deliver sustainable solutions by playing by the Vested© rules.

Rule # 1: Focus On Outcomes, Not Transactions

The countryside of many developing countries is littered with broken wells and pumps. Women and children walk by remnants of good intentions and wasted money as they renew the daily trips to the river to retrieve water that carries sickness. The equipment works for a few months, but, once broken down, is useless and serves no purpose other than building distrust for the next NGO that comes around.

For decades, governments and NGOs have thrown money at the problem, drilling wells and installing equipment. Water For People rejects the paradigm that simply installs water systems as gifts and assumes that beneficiaries will have water for the foreseeable future. It works toward a more durable solution. In collaboration with local governments, the private sector, and civil society, Water For People facilitates provision of sustainable services. Building the functional environment – that’s what Water For People are all about.

CEO Ned Breslin explains, “What sustainability means to us is that beneficiaries counted today can still get safe water from functioning taps or pumps in 10 years. And when it’s time for a new water system, beneficiaries and local government partners can replace the hardware themselves without seeking financial and technical help from yet another development organization. Sustainability means that people who start using a latrine today will never have to go to the bathroom outside again. And when the pit fills up, they can sell the contents for compost, or call a pit-emptying service, or replace their pit latrine.”
Keeping a laser-like focus on the outcome reinforces the determination to achieve. And at the same time, allows going to a multitude of potential options with impunity. This is especially important when working in developing countries with sparse resources.

**RULE # 2: Focus On The WHAT, Not The HOW**

Water For People considers many factors when choosing a region in which to work: community motivation, costs, the availability of a trustworthy NGO partner, the support (financial and otherwise) of local government, and a safe environment. Vested thinking demands working models that work with communities, respecting their decisions and empowering their independence. As a development organization determined to meet its goals, Water For People’s approach to alliances includes the perspective and active collaboration of all stakeholders – the people and the communities.

Water For People establishes approved government relationships and offices in the localities selected to receive assistance. Reaching out directly to local communities, Water For People and its partners define desired outcomes and set forward a clearly shared vision that the government and citizens can rally behind.

In-country Water for People leaders work with the individual regions to determine how to proceed. The parties use a Memorandum of Understanding (MoU) to list joint responsibilities as well as each partner’s role and individual responsibilities. Joint responsibilities anticipate collaboration will establish baselines, determine number and extent of projects, develop implementation plans, identify obstacles, and plan for ongoing monitoring and repair. Emphasis is explicit that all parties work to build communities’ capacities to reach independence. That translates to finance and sustain water service for the future.

Whether coming up with a solution in the Bengal Region of Northern India or the District of Rulindo, the specific strategy for the HOW is left up those in country who are best able to define creative solutions to get the job done as long as they are focused on the primary outcome—to keep the water running.

**Rule 3: Clearly Defined And Measurable Desired Outcomes**

Water for People has one primary clearly defined and measureable outcome:

> "We measure our results over time so that we can prove that our solutions hold up for the people we serve. We use the long-term sustainability and effectiveness of our work as a gauge for those who donate, volunteer, and advocate on our behalf."  

Each project not only defines what needs to be accomplished, but also what success will look like. Water for People examines the efficacy of the various program results formally every 3, 6, and 10 years from each project’s inception date is of particular significance. That way, assurance is granted that that old programs are up and running, new programs are designed to last, and promises are kept.
Of course, nothing – not even sophisticated technology – takes the place of the question, “IS THE WATER STILL RUNNING?” In a world littered by failed and abandoned water systems and people desperate for safe water, asking the question keeps Water For People’s eyes on the prize.

**Rule 4: Pricing Model With Incentives**

In simple terms, Water For People invests resources with local entrepreneurs, civil society, governments, and communities that invest their own energies and resources to ensure long-term, infectious results. They form Vested partnerships. All parties look beyond self-interest to what’s best for the other parties. They ask the questions, “What do we need to make this self-supporting?” “How can we expand the project to include others?” Are we safe-keeping Water For People’s reputation and fiduciary responsibility?” They stop thinking about “What’s In It For Me” (WIIFMe) and start thinking about “What’s In It For We (WIIFWe)”

Shared investment becomes an important focus for the communities and creates a sense of accountability. When leaders of Cuchumuela, Bolivia, offered a neatly tied up handkerchief holding $1,000 to Water For People to help pay for new water projects, they extended a commitment to help make the projects a success as well. Skin in the game creates ownership.

**Rule 5: Insight Versus Oversight Governance Structure**

Shared governance starts with Water For People’s **FOUR GUIDING PRINCIPLES – ONE HUMAN NEED** philosophy. The principles form the consistent policy that underpins all action:

1. We believe in people.
2. We keep it local.
3. We keep good company.
4. We keep our promises.

Although individual agreements vary widely, the ethics that drive each and every commitment are constant. The principles are always adhered to, while tools and technologies change, case by case. This creates tight alignment while allowing for a great deal of flexibility.

The power of governance is designed to be held by leadership closest to the problem. Sometimes, this means a newly elected community board. Sometimes, it piggybacks onto an established PTA or council. But it is always the local citizens who make the important day-to-day policy decisions. Water For People supports the leaders with education, advice, and established tools.

**Results**

Water For People is currently the only water and sanitation sector development organization that guarantees post-project monitoring for at least 10 years. Independent monitoring of its programs reported that an average of 96 percent of water systems are still functioning after four years. In locales such as Cuchumuela, Bolivia and Chinda, Honduras, Water For People reached 100 percent full water coverage.

Water For People models results-based behaviors that achieve real success. Its story shows that Vested principles can belong to any organization – public, private, for-profit, and nonprofit, very large entities, or one individual at a time.
Acknowledgments

The University of Tennessee and the authors would like to thank CH2M Hill and the dedicated professionals at Water For People for their assistance. Extensive information is readily accessible through the Water For People website. The complete case study is featured in our Executive Education classes and will be featured in the upcoming book *Vested: How P&G, McDonald’s and Microsoft Are Redefining Winning in Business Relationships*.
